TES OBJECTIVES

Primary objectives:

- To estimate the exposure of U.S. adult cigarette smokers to cigarette smoke constituents using selected biomarkers of exposure
- To investigate the relationship between cigarette smoke exposure of U.S. adult smokers and tar delivery

TES OBJECTIVES (cont.)

Secondary objectives:

- To evaluate smoking behavior as it relates to cigarette smoke exposure
- To compare selected biomarkers of U.S. adult smokers to adult non-smokers
- To investigate the relationship between selected biomarkers of potential harm and cigarette smoke exposure

TES Study Design

- Multi-center
- Ambulatory
- Cross-sectional
- Observational
- 5 Parallel groups:
  - 4 Groups of adult smokers based on FTC tar delivery categories
  - 1 Group of adult non-smokers

TES Study Population

- 4661 Subjects
  - 3585 adult smokers:
    - Representative of adult US smokers population
      - FTC tar delivery category
      - age
      - gender
      - geographic location
      - ethnic distribution
      - socioeconomic distribution (income and education)
  - 1076 adult non-smokers
- 39 Sites across US
